

How does Quick Look work in Parallels virtual machines?

- Parallels Desktop
- Parallels Desktop for Mac Standard Edition
- Parallels Desktop for Mac Business Edition
- Parallels Desktop for Mac Pro Edition

Question

I'd like to know how to use Quick Look in a Windows virtual machine.

Answer

OS X Quick Look can be used in Windows virtual machines for the files and folders in the virtual machine's Shared Profile:

Quick Look is accessed the same way in virtual machines as it is on OS X, by pressing **Space** on the highlighted file in Windows File Explorer. You may also press **CMD+I** to invoke file properties.

You can also watch the video to learn more about Quick Look:
