

Published Application opens across two monitors

- Parallels Remote Application Server 14.1

Symptoms

One of published applications opens across two monitors. Its window located almost on 1 and 1/2 monitors.

- No issues using a start program via Microsoft RDP.

Cause

Misconfiguration.

Resolution

1. Be sure that "Use RemoteApps if available" enabled on Terminal Server.
2. On the RDP Client side go to **Connection Properties > Displays > tick "Use all monitors for Desktop session (if applicable)"**
3. Rlogin to the server.
