

Unable to open Published application: Code 02/00000003

- Parallels Remote Application Server

Symptoms

1. An attempt to open a published application results in the following error:

Code 02/00000003. The client could not access the remote application...

Cause

- Remote Desktop services are not running on Terminal server.
- Terminal Server Agent Port does not match system RDP port.

Resolution

1. On Terminal server open **services.msc** applet and start **Remote Desktop Services** service.
2. On Terminal server check the following Windows Registry entry:

`HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\TerminalServer\WinStations\RDP_Tcp\PortNumber`

3. Make sure its decimal value matches the port specified in **Parallels Remote Application Server console > Farm > Terminal Servers > Terminal server properties > Agent Settings > Port**.

NOTE: if system RDP port has been recently changed on Terminal server, restart of **Remote Desktop Services** service is required.
