

How to implement Windows PerfMon counters in a custom monitoring system

- Parallels Remote Application Server

APPLIES TO:

Windows Server 2012 R2

Information:

Configuring monitoring system (for example [Zabbix](#)) usage for Remote Application Server resources.

1. Go to start and search **perfmon** or **performance monitor**
2. Open it and go to **Monitoring Tools > Performance Monitor**
3. Click add and find the required counters:
4. Add them to the right column and press **OK**

NOTE: *For particular Monitoring System the resolution will depend on commands used to interact with Windows Server 2012 R2 Performance Monitor.*
