

How to create custom shortcuts for mobile client keyboard

- Parallels Remote Application Server 19.1

Information

Quick Keypad feature allows to create custom shortcuts in order to simplify working with a virtual keyboard on a mobile client.

1. Open Remote Application Server Console.
2. Go to Quick Keypad > Tasks > New Quick Keypad.
3. Add either a **New shortcut** (up to three shortcuts in one item) or a **New menu** (folder containing few **New shortcut** items):

4. After defining required shortcuts, right-click on a created **Quick Keypad** item and go to **Assign to Application** to select required applications for this template:

As a result, Quick Keypad menu will be available on the virtual keyboard when running a published application:
