

Configuring Windows template on KVM and Nutanix Acropolis hypervisors

- Parallels Remote Application Server 19.1

Configuring Windows template on KVM and Nutanix Acropolis hypervisors

1. Windows virtual machine running on KVM and Nutanix Acropolis hypervisors requires a VirtIO driver installed in the guest. Stable virtio-win iso can be found here: [Windows Virtio Drivers](#) .
 2. Once downloaded, attach it to the virtual machine and install missing drivers:
 - ◆ Red Hat VirtIO Ethernet Adapter
 - ◆ VirtIO Balloon Driver
 - ◆ Red Hat VirtIO SCSI pass-through controller
 3. Install required software.
 4. Join template to domain if required. It is not a requirement, since all guests will be joined to domain after template deployment in any case.
 5. [Install RAS Guest Agent](#).
